Folio: tradeshow run sheet

Team 11 · DECO3500 · Week 12 (Tue 20 or Thu 22 Oct, day to confirm) · every member must be able to pitch · live: s4899427.github.io/Team_11_Folio · sandbox: …/#/demo

BEFORE YOU LEAVE (DAY BEFORE)

- ☐ Phone charged; second device charged; power bank
- ☐ QR on poster opens live site on mobile data (not wifi)
- ☐ Guest join works; curator and team accounts logged in on the second device
- ☐ Today's Edition shows (Folio Desk fallback if none)
- ☐ Screen recording of the five flows saved on the phone
- ☐ Poster printed, tape, A2 stand; printed copy of this sheet
- ☐ Pitch rehearsed aloud with a timer: Dylan, Pranav, Shaz
- ☐ An Edition is published for the morning of the pitch (the hook points at today's curator)
- ☐ Notebook or phone note ready to capture what visitors say (quote, code, what it touches)

THE STAND (WHO DOES WHAT)

Dylan	Pitch lead, Q&A on product, research and ethics
Pranav	Demo phone, live site, QR, Q&A on build and database
Shaz	Poster, visitors, notes of what people say, Q&A on design and audience

START TO END

1. **Set up (15 min):** poster up, QR visible, both devices on Today
2. **Invite:** "Scan, tap Join as a guest, read today's Edition."
3. **Pitch (2.5 min):** hook, problem (one real quote), idea, show, why social and mobile, what we learned, close
4. **Demo path (45 s):** Today → open a Liner Note (fact and source) → "did this show you something new?" → Browse → Nearby
5. **Two-phone moment:** a visitor comments on the same Edition; show it appearing on the other phone
6. **Q&A:** answers in *DEMO_SCRIPT_AND_PROF_QA.md*
7. **Capture:** write down 3 things visitors said (quote, code, what it touches). It goes into the wiki
8. **Pack up:** photo of the poster at the stand for the wiki

THE PITCH (2.5 MIN): HOOK FIRST

- **Ask, then pause:** "What's the last song you loved because a *person* told you about it, not because an app suggested it?"
- **Evidence:** "One interviewee told us: 'I just want it to be more human focused.' Music Australia's 2025 research: streaming is now the main way people discover music, and algorithms may make emerging Australian artists harder to find." *(Confirm in the report first; cut if you cannot.)*
- **Idea:** "Closer to what radio used to do for a city: once a day, one named person picks 8 to 12 songs and tells you why. No likes. No ranking. That's Folio." Hold up the phone: "Here's today's curator."
- **Then:** demo, social and mobile (visibility versus privacy, no counts), what we learned (one real finding), close: "One Edition, one city, one day. Scan the QR."
- **Remember:** the tradeshow is a **demonstration**: get visitors using it themselves, several at once.

SHORT ANSWERS (FULL LIST: 12 QUESTIONS IN DEMO_SCRIPT_AND_PROF_QA.MD)

- **Why real accounts?** The idea needs accountability: named curators, approval, artist-to-fan links. Guests join with a first name.
- **Real or simulated?** Real: accounts, roles, publishing rules, comments, midnight lock, shared database. Simulated: seed Brisbane Editions, other cities "Coming soon", curator-entered gig tips.
- **Why no likes?** Popularity loops bury local artists; rules are political choices (Winner, Akrich).
- **AI-made music?** We cannot detect it. A named curator signs "human-made, local and new" and cites two sources. They could sign falsely; we have not tested abuse.
- **Limits?** Local and new are claims, not measurements; no stream counts; some seed facts still being cross-checked; no Brisbane Aboriginal music fact claimed; small, short, formative evaluation in one city; proof of concept (no email recovery, moderation tools, licensing, scale testing).
- **Bad curator?** Applied for and approved by the team; every pick sourced; the team can remove.
- **Why 8 to 12 and 2 to 4 new?** Our judgement, tested in evaluation Q8.
- **AI use?** Claude helped with code, documents, evaluation design, tests and city-fact research; the team made every decision. Prompts are in the appendix.

IF SOMETHING BREAKS

- No wifi → play the screen recording; say it is the same app
- Live site down → open the sandbox (**#/demo**): local data, every role, no passwords
- Login problem → use *Join as a guest*

Do not claim: a gig verification queue or AI link check (not built); that the app is "validated"; stream counts or SoundCloud integration; any evaluation result we do not have; Aboriginal artwork in the app (none used).
